Hotel Performance Analytics Dashboard (Power BI)

Analyzing Revenue, Occupancy & Booking Trends in Hospitality

Problem Statement

AtliQ Grands, a luxury hotel chain, was facing declining revenue and market share due to ineffective decision-making and rising competition.

The objective was to analyze hotel performance data and generate actionable insights to improve business outcomes.

Business Objective

- Identify factors impacting revenue performance
- Analyze occupancy trends across cities & properties
- Evaluate booking platform contribution
- Enable data-driven decision making

Key Metrics (KPIs)

- Revenue
- RevPAR (Revenue per Available Room)
- ADR (Average Daily Rate)
- Occupancy %
- Realisation %

Key Insights

- Weekend occupancy is significantly higher than weekdays
- Direct offline bookings generate higher ADR
- Certain properties outperform others in revenue & ratings
- Booking platforms contribute differently to overall revenue

Tools & Skills

- Power BI
- Power Query
- DAX
- Data Modeling (Star Schema)
